EDUCATION

Minerva University

San Francisco, CA

Candidate for Bachelor's in Computational and Social Sciences (Data Science and Economics)

Expected Graduation May 2027

- Relevant coursework: Machine Learning, Econometrics, Bayesian Statistics, Data Structures & Algorithms, Modeling & Simulation, Probability & Statistics, Linear Algebra, Multivariable Calculus.

EXPERIENCE

Puerta 18

Buenos Aires, Argentina

CRM and Data Systems Developer

Sep 2025 - Apr 2026

- Built the organization's first data infrastructure from scratch: interviewed staff to identify requirements, defined success metrics, and designed a SQL-backed architecture to centralize 18 years of unstructured paper records; defined data standards and documentation for long-term maintainability.
- Engineered automated reporting pipelines (Python, SQL) and live KPI dashboards used daily by staff; eliminated 15+ hrs/week of manual reporting and increased admin capacity by 0.4 FTE.

Terra Education at UC Berkeley

Berkeley, CA

Data Science and ML Teaching Assistant

Jun 2025 - Aug 2025

- Guided 150+ high school students through end-to-end DS/ML projects: data cleaning, feature engineering, model training and evaluation; coached teams on scoping ambiguous problems and translating model outputs into defensible decisions.

GSP Cloud

Seoul, South Korea

Product Development Intern

Jan 2025 - May 2025

- Scoped and shipped an AI learning assistant for a Korean B2B edtech platform; defined the feature set (lecture summaries, smart Q&A, comprehension quizzes) based on drop-off analysis of 45-90 min lecture sessions.
- Ran A/B tests on AI response strategies across ~400 users; used behavioral log analysis to identify engagement friction, iterated on prompting and UX, driving a 12% increase in user retention.
- Evaluated GPT-4o vs. GPT-4 across 50+ test scenarios; wrote and maintained regression-test protocol to preserve stable product behavior across model updates.

Minerva University

San Francisco, CA

Data Analysis Intern - Admissions Team

Sep 2024 - Present

- Spotted a reviewer workflow bottleneck and independently built a Gemini API-powered web app to surface rubric-aligned observations on applicant essays, improving reviewer throughput without sacrificing evaluation quality.
- Analyzed 20,000+ applicant records using Python (Pandas, NumPy) to identify trends in applicant quality and volume; built segmentation logic that directly guided team prioritization during peak review cycles.

PROJECTS

[Basqa E-commerce Platform](#) | *Full Stack, JavaScript, SQL, A/B Testing*

- Replaced a WhatsApp-based sales workflow with a full-stack e-commerce site: conducted store owner interviews to prioritize features, ran A/B tests on checkout flow components, and iterated on UX based on drop-off data, contributing to 30% sales growth within 3 months of launch.

[Personalized Image Recommendation Model](#) | *OpenAI CLIP, KMeans, Cosine similarity, Revealed Preference Theory*

- Identified the problem: scrolling a camera roll to find the right photo to post is slow; developed a model that learns individual aesthetic from past Instagram posts to rank new photos by predicted posting likelihood, with no retraining required at inference time.

Imperium Volunteers | *Python, pandas, scikit-learn, Stakeholder Research*

- Modeled volunteer engagement and dropout risk on 500+ records to help the organization intervene earlier; improved identification of low-engagement volunteers by 30% and contributed to a 15% increase in participation.

SKILLS

- **Product:** PRDs, user research & interviews, requirements definition, feature prioritization, competitive analysis, roadmapping, A/B testing, experiment design, Figma, Agile, Notion
- **Technical:** Python (advanced), SQL (advanced), JavaScript/React (intermediate), R (intermediate), LLM integration, prompt engineering, REST APIs
- **Data & Analysis:** Pandas, NumPy, Matplotlib, Tableau, causal inference, behavioral analytics, Excel/Sheets
